Packet Set-Up with Baofeng HT

**YouTube Video
Detailing Set-Up**

<https://www.youtube.com/watch?v=W5NeGF1kIQY>

Packet Set-Up *part 2*

The 'Settings' dialog box is divided into three main sections:

- Sound Card:** Output device is 'Speakers (3- USB Audio CODEC)'. Input device is 'Microphone (3- USB Audio CODEC)'. Checkboxes for 'Dual channel', 'TX rotation', 'Single channel output', 'Color waterfall', and 'Stop waterfall on minimize' are all checked. TX and RX SampleRate are set to 11025, and TX and RX corr. PPM are set to 0. Priority is set to 'Highest'.
- Server setup:** AGWPE Server Port is 8000 and KISS Server Port is 8100. Both are checked as 'Enabled'.
- PTT Port:** Select PTT port is 'NONE'. 'Dual PTT' and 'Swap COM pins for PTT' are unchecked.

Buttons for 'OK' and 'Cancel' are at the bottom.

The 'Modem settings' dialog box is split into two columns for 'Modem filters ch: A' and 'Modem filters ch: B'.

Modem filters ch: A: BPF Width (1400), TXBPF Width (1600), LPF Width (650), BPF Taps (256), LPF Taps (128). Default settings, PreEmphasis filter (None), KISS Optimization, and non-AX25 filter are checked.

Modem filters ch: B: BPF Width (500), TXBPF Width (500), LPF Width (155), BPF Taps (256), LPF Taps (128). Default settings, PreEmphasis filter (None), KISS Optimization, and non-AX25 filter are checked.

Modem type ch: A: Mode is 'AFSK AX.25 1200bd'. TXDelay (400 msec), TXTail (200 msec), Add. RX (0 pairs), Add. RX shift (30 Hz), and Bits Recovery (NONE) are set.

Modem type ch: B: Mode is 'AFSK AX.25 300bd'. TXDelay (250 msec), TXTail (50 msec), Add. RX (0 pairs), Add. RX shift (30 Hz), and Bits Recovery (NONE) are set.

Buttons for 'Ok' and 'Cancel' are at the bottom.

The 'Packet Winlink/P2P Setup' dialog box has two main sections:

- TNC Connection:** Packet TNC Type is 'KISS'. Packet TNC Model is 'ACKMODE'. Serial Port is 'TCP'. Autoconnect time is 'Disabled'. TCP Host/Port is '127.0.0.1'. Packet sound modem is empty, and 'Automatically launch packet sound modem' is unchecked.
- TNC Parameters:** Baud rate is '1200 Baud'. TX Delay (Milliseconds) is 500. Maximum Packet Length is 255. Maximum Frames is 2. Frack is 2. Persistence is 160. Slot time is 30. Maximum Retries is 5. Transmit Level is 100. 'Enable IPoll' is checked.

Buttons for 'Update' and 'Cancel' are at the bottom.

Using RMS *Radio Message Server*

1. Open Packet Winlink

2. Access BBS

Post the ID of the Needed Digipeater, Here

Use Digipeaters & Nodes

Digipeaters Function Like Voice Repeaters but for Digital Systems (*SCREST, RAVNRD...*)

Modes are a Home Packet Stations Set-Up to Function like a Digipeater.

Hi Ed, KC2LM

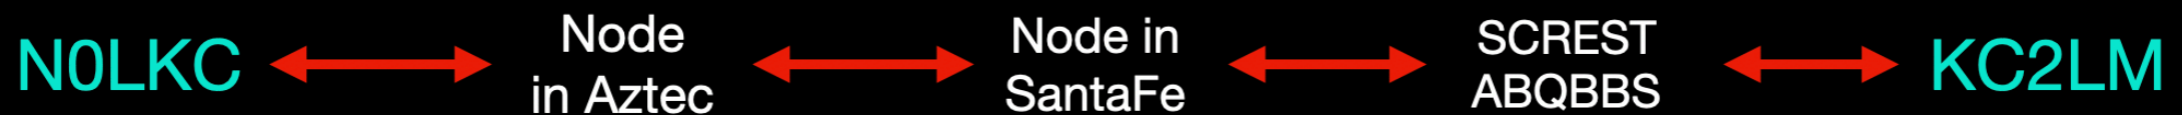

Wanted to let you know I have submitted the packet exercise to K5WRT; hope it makes it OK. I posted the progress made here today, very cool to get into the CMS gateways directly with packet. Definitely have never been able to do that before.

Sent one test exercise via HF winlink. Not being satisfied, I finally got packet to work with a connection script, and so also sent it by VHF Winlink.

Hope it all starts to work OK, would be fun to be able to tie in with packet activities across 4 corner states.

Thanks again for the packet participation prospects. Look forward to continuing, 73 from **Clifford N0LKC**
